Summary

Software Engineer with 4 years of experience in full stack development using ASP.NET Core, C#, React.js, JavaScript, Entity Framework Core, and SQL. Experienced in building scalable REST APIs, Microservices, JWT authentication, and gRPC-based services while optimizing application performance and database efficiency. Skilled in Docker, GitHub Actions, Agile methodologies, and modern software design principles, with a strong focus on developing secure, maintainable, and high-performance enterprise applications.

Skills

Programming Languages: C#, JavaScript, TypeScript, SQL

Backend Development: ASP.NET Core, Web API, RESTful APIs, Entity Framework Core, LINQ, Dependency Injection, gRPC

Frontend Development: React.js, Redux

Database Technologies: SQL Server, MySQL, Query Optimization

Architecture & Design: Microservices, MVC Architecture, SOLID Principles

Authentication & Security: JWT Authentication

DevOps & Tools: Docker, Git

Development Practices: Agile, Scrum, SDLC, Code Reviews

AI Tools: GitHub Copilot, OpenAI API

Experience

Software Engineer

March 2025 – Present

Advision Research & Development Pvt. Ltd.

bengaluru, India

- **Engineered scalable EdTech platforms** leveraging React, TypeScript, and ASP.NET Core, delivering AI-assisted learning systems and immersive digital education experiences for institutional and enterprise clients.
- **Architected and developed modular RESTful APIs** leveraging React, TypeScript, and ASP.NET Core, delivering AI-assisted learning systems and immersive digital education experiences for institutional and enterprise clients.
- **Designed dynamic React-based UI components and dashboards** supporting interactive learning modules, real-time learner progress tracking, and user engagement across AI and VR-enabled educational platforms.
- **Collaborated with product teams, designers, and AI researchers** to translate client requirements into scalable technical solutions while improving backend performance and implementing secure role-based access control

Software Developer

February 2024 – February 2025

Intima infotech LLP.

Mysore, India

- **Engineered and maintained enterprise-grade Order Management systems** using React and ASP.NET Core, handling end-to-end order lifecycle workflows including creation, tracking, invoicing, and delivery updates.
- **Developed and deployed RESTful APIs** following MVC architecture principles, improving system modularity and enabling seamless frontend-backend integration across multiple business modules
- **Optimized enterprise database performance by identifying and resolving critical backend bottlenecks** by leveraging SQL execution plan analysis and implementing strategic indexing, I reduced average query response times by 40%. This enhancement directly improved system stability under heavy concurrent user loads, ensuring a seamless experience for global stakeholders and significantly reducing server-side latency across high-traffic order management modules.
- **Strengthened system scalability and maintainability** by refactoring legacy modules, implementing reusable service layers, and enforcing clean code standards across backend components
- **Worked within Agile sprints with cross-functional teams** including QA, analysts, and client stakeholders, translating business requirements into technical solutions and delivering feature releases on schedule
- **Participated in production issue resolution and performance tuning** ensuring high availability and stable deployments across enterprise environments.

Software Developer

May 2022 – February 2024

Seagulsoft PVT Ltd.

bengaluru, India

- **Played a key role in full-stack development of e-commerce and institutional web platforms** using React and ASP.NET, supporting critical modules including product management, user workflows, and transactional APIs.

- **Spearheaded the design and refinement of robust RESTful services** to bridge the gap between complex frontend requirements and backend logic, directly accelerating feature delivery cycles. By implementing a modular API architecture using ASP.NET Core, I ensured that new business modules could be integrated seamlessly without disrupting existing workflows
- **Improved application stability and performance** by diagnosing production issues, refactoring legacy code, and optimizing database interactions, resulting in smoother user experience during peak traffic
- **Implemented new feature modules and resolved high-priority defects** maintaining consistent release cycles and ensuring minimal disruption to live business operations.
- **Strengthened database performance** through query tuning and structured data validation, reducing redundant operations and enhancing backend efficiency
- **Collaborated directly with clients and cross-functional teams** to gather requirements, translate business needs into technical specifications, and deliver iterative improvements under Agile methodology

Projects

Abhignya Learning & Immersive EdTech Platform | *React, .NET, REST APIs, MySQL*

- **Developed and maintained an AI-powered EdTech platform** delivering interactive digital learning experiences with support for adaptive content delivery and immersive VR-based educational modules
- **Architected scalable RESTful APIs** Engineered new features including contract type buckets and tenure bands to improve segmentation and insights.
- **Designed responsive React-based interfaces and dashboards** enabling real-time learner progress tracking, course management, and seamless interaction with immersive learning modules
- **Collaborated with product teams and client team** to translate educational requirements into scalable web solutions while optimizing backend performance and database efficiency.

BETA Layout GmbH – PCB Order Management System | *React, TypeScript, .NET, REST APIs, SQL*

- **Architected and enhanced an end-to-end PCB Order Management System** covering order creation, lifecycle tracking, invoice generation, delivery notes, and status workflows for enterprise clients.
- **Designed scalable RESTful APIs** to handle order validation, dynamic pricing logic, and status transitions, ensuring seamless frontend-backend synchronization
- **Optimized database performance** by refining complex joins, indexing frequently queried fields, and restructuring queries, improving order retrieval efficiency under concurrent load
- **Implemented role-based access control (RBAC)** to manage permissions across admin, production, and logistics teams, strengthening system security and workflow integrity

AETZWERK GmbH – Enterprise Order Processing Platform | *.NET, C#, React, REST APIs, SQL*

- **Contributed to the development of a high-reliability order processing platform** supporting PCB manufacturing workflows including quotation, production tracking, and dispatch coordination
- **Created backend services in ASP.NET Core** to manage transactional operations, API integrations, and real-time order status updates
- **Enhance system maintainability** by refactoring legacy modules and enforcing modular service-layer architecture for cleaner dependency management.
- **Collaborated with cross-functional stakeholders** to translate manufacturing requirements into scalable technical solutions, ensuring timely feature rollouts and production stability

Certifications

- **Full-Stack Web Development certification – Udemy (2024)**

Education

Bachelor of Engineering

Sri Jayachamarajendra College of Engineering, Mysore, Karnataka
